### guidelines

**Revolution<sup>®</sup>**

2024  
VERSION 1.0

# our core values

# file

# extension

## AI

An AI file is a proprietary, vector file type created by Adobe that can only be created or edited with Adobe Illustrator. It is most commonly used for creating logos, illustrations and print layouts.

*Best use = creating logos, graphics, illustrations.*

## EPS

An EPS file is a vector file of a graphic, text or illustration. Because it is vector it can easily be resized to any size it can be. An EPS file can be reopened and edited.

*Best use = master logo files and graphics and print designs.*

## PDF

A PDF is a Self-contained document which preserves fonts and graphics.

*Best use: Styled documents meant to be read but not edited.*

## TIF

A TIF (or TIFF) is a large raster file. It has no loss in quality and therefore is primarily used for images used in printing. On the web, because of load time, you generally want to use smaller images such as JPG or PNG.

*Best use = images and photographs for high quality print.*

## EDITING VECTOR FILES AND SAVING TEXT "IN OUTLINES"

Vector files such as AI and EPS can remain editable so you can open them back up in Illustrator and edit any text or other elements within the graphic. With images that contain text that are saved as a JPG, PNG or GIF, you would not be able to reopen and edit the text.

Saving in "outlines" is a term that you will hear when sending files to print. If a printer doesn't have a font you used in your design and the vector file is not saved in outlines then when they open the file the text won't have the desired look as it will default to a different font. Saving something with "outlines" basically means you are locking the text so that it's no longer technically a font but instead made up of vector shapes that form your letters. This is important when sending graphics to print. Saving a file in outlines makes your text no longer editable.

## FILES WE DON'T RECOMMEND

### JPG

JPG (or JPEG) is a raster image that is often used for photographs on the web. JPGs can be optimized, when saving them out of Photoshop, to find the perfect balance of small file size and high quality. On the web, you want your images files to be as small as they can be so your site loads quickly, but large enough to still appear crisp and not pixelated. A JPG can't have a transparent background so they are always in the shape of a rectangle or square with a solid background.

*Best use = rectangle or square photos and photographs on your website.*

### PNG

PNG is another raster image type. For the general marketer, the main difference to understand between a PNG and JPG is that a PNG can have a transparent background and is generally larger and higher quality. Therefore a PNG is ideal for saving logo files for websites because they can be placed over a colored background.

*Best use = logos, icons and other images where a transparent background is preferred.*

### GIF

A GIF is another raster image type. A GIF is formed from up to 256 colors from the RGB colorspace. The fewer colors and shades contained in an image, the smaller the file size. Therefore a GIF is ideal for images that use just a few solid colors and don't have gradients or natural shades. You wouldn't want to use a GIF for a photograph.

*Best use = simple web graphics such as web buttons, charts and icons.*

# 02

# flexographic printing specs

	Water Press	Solvent Press
	SPOT COLORS	CMYK
Type Of Plates:	Polymer (Cyrel)	
Sticky Back:	.020	.020
Screens:	60 Lpi	120 Lpi
Plate Thickness:	.112	.067
Trapping:	7pt	4.5pt
Min Type Size:	7pt Positive	9pt Reverse
Min Stroke Weight:	1pt Positive	1pt Reverse
Screen/Gradient Values:	Min 7% - 60% Max	Min 1.5% - 90% Max
Dot Gain:	20%-20%	
Center Lines:	— — 	NA
Micro Dots Size:	NA	.72pt ●
Registration Tolerances:	1/16 Per Color	
Inks	Pantone Coated	

#### INKS:

- Standard Ink colors - No Charge.
- PMS colors can be matched - \$100 charge per color will apply.

#### TRAPPING:

- Trapping must be reviewed on all prints.
- We can advise best trapping, drop shadows or stay-aways.

#### PRINTABLE AREA/BLEEDS:

- Print needs to stay 0.5" from sides and bottom of bag if there are no bleeds.
- Bottom gusset art must be 0.75" from all sides.
- Gussets can have a bleed of 0.5" minimum -maximum depends on size of gusset.

#### EXCEPTIONS:

- Any art that bleeds on sides must have pre approval.
- Ameritotes bags are the only bags that can have art bleedoff the top - pre approval.

03

# artwork

## specs

### **ARTWORK WILL BE ACCEPTED IN THE FOLLOWING METHODS:**

1. E-Mail: [art-vern@revolutioncompany.com](mailto:art-vern@revolutioncompany.com)
2. USB Drive.

### **CAMERA READY ART:**

Art must be camera ready in vector line format. We prefer to receive art in Adobe Illustrator (.ai or .eps) files with all fonts outlined.

No artwork charge for camera ready art, unless trapping and screens are involve.

*If camera ready art work is not available, we will accept in any visible sample for our art department to manipulate or recreate. Artwork charges will vary depending on the amount of prep work needed to ensure the artwork meets print specifications.*

### **RESIZING ARTWORK**

- Camera ready art does not need to be to size.
- There is no charge to reduce or enlarge (if less than 200%).

*Note exception: screened artwork will become finer when reduced; therefore, art should be to size.*

### **CENTER LINES**

- Center lines are needed on all four sides of each color separated graphic .
- Center lines should be close to the art - place center lines no more than 1/8" out of printing area.
- Center lines should be only 1/8" long.

### **CLOSE REGISTERED ART**

Art department will need to adjust art to allow for movement on close registered art.

### **POSITIONING**

Art department will position art for best display of graphics.

### **MERCHANDISE BAG WITH HANDLE:**

- Handle takes top 4 inches of bag.
- Graphic must start at least 1/2 inch in from each side & 1-2 inches up from bottom.

### **Example:**

If your bag size is 12x3x18, max image size left to right would be 11 inches and top to bottom would be 14 inches.

Note: We do not recommend having ink in handle area due to ink rub off.

### **T-SHIRT BAGS:**

- Same as above but handle takes up 6 inches of the top of the bag.

### **SUPER WAVE BAGS:**

- Same as above but handle takes up 5 inches of the top of the bag.

### **WARNING MESSAGE**

- Warning message is required on bags that are 10 inches or wider unless bags are 1 mil or greater.
- No warning is required on bags that are 1 mil or greater in thickness.
- Warning message will be printed on the gussets or the face of flat bags.
- T-shirt bags will have warning message printed on the side gusset.

### GARMENT ONLY

**Sideweld Bags Run Sideways So WIDTH is the LENGTH**

Orders that are multiple colors on two sides with the size of 12", 13" and 14" that require (2UP, 2 DOWN). Any questions contact printing dept for details.

Random repeat use 15", 16" or 18" cylinders. Anything below 15" needs to be 2 webs. Any questions contact printing dept for details.

### SIDE SEAL BAGS

Cylinder size determines the WIDTH of the bag. Super Wave, Super Gloss, AmeriTotes, Saddle Pack and Grab and Go.  
(all side seal - bottom gusset bags)

### BOTTOM SEAL BAGS

Cylinder size determines the LENGTH of the bag. Merchandise and T-Shirt.  
(bottom seal - side gusset bags)

07

# bag handles

**SOFT LOOP HANDLE**  
Ameritote

Handles approx. 3" to 3-1/2" apart - centered from side to side.

**ROUND HANDLE**  
Superwave

Opening is 2-1/2" round and starts approx. 2-1/2" from top - centered from side to side. Placement may vary up to 1/2".

**BANANA HANDLE**  
Super Gloss

Handle approx. 2-1/2" from top - centered from side to side.

**KIDNEY BEAN HANDLE**  
Super Satin

Handle approx. 2-1/2" from top - centered from side to side.

**FOLD OVER RACETRACK**

Handle approx. 1-1/2" from top - centered from side to side.

**Note: Artwork should stay 4" away from the top of the bag to prevent the handle from cutting into the print. Handle placement may vary up to 1/2 inch.**

# primary logo + variations

## PRIMARY LOGO COLORS

This is the primary and preferred format of the Revolution logo, to be used in all applications and on white backgrounds whenever circumstances allow.

## ALTERNATE LOGO VERSIONS

For appropriate instances, the primary logo may be shown with the tagline in a 1- or 2-color application. Uses for the tagline lock-up version is on a case by case basis, often used for internal branding purposes or when contextual narrative for the brand may be unavailable. The tagline should never be typed out or locked with primary logo other than the approved design.

# glossary

## terms

**Registration** - Printing registration is how close the colors are to each other on the graphic being printed.

**Tight Registration** - When colors are actually touching or very close (less than 1/32) together.

**Registered Print** - One image per bag, placed on each bag in the same place.

**Eye mark** - Registration mark that is read by an electric eye that sends a message to the bag machine to cut and seal the bag. Revolution normally uses a rectangular mark in the bottom corner of the bag.

**Random Print** - Typically used for warning messages at Revolution. Print is placed on bag in a random repeat a specific number of inches apart. Bags could have one or more images per page and some images may be cut off.

**Trapping** - Laying one (usually the darker color) over another color to form an edge or border.

**Stay Away** - To make space between colors to allow for movement when trapping will not work.

**Halftone/ Screen** - The process of using dots to make a color appear lighter without adding an additional color to the graphic.

**Color Separation** - Formatting art so each color is separate.

**Line Screen** - Number of dot per inch the more dots the finer the screen.

**Ink Coverage** - Amount of ink coverage on the bag compared to the bag size. This is somewhat of a judgment call at Revolution. Best printing is with 25-50% ink coverage or less -especially when printing smaller jobs (5m to 50m bags). Heavier coverage (up to 80%) is usually only considered on longer runs. Bleed - When Ink extends past the side, top, bottom or gusset of the bag. Any bleed (except into a gusset) must be pre-approved at Revolution.

**Mock Up** - Pasting artwork on an existing bag - this is usually only done by printing an image from the printer and adhering it to a bag. This is not representative of the actual print on a bag and usually done for size only.

**Template** - Definition: "Something that serves as a model for others to copy". At Revolution this is our art department's reproduction of the bag. This TEMPLATE incorporates bag style, size, gauge, film colors and all graphic specifications. This is what is approved by the customer. This template is also used in the factory as a guide for printing operators and conversion.

**Ink Draw Down** - When ink is rolled manually on to film to show what the ink color will look like on the film. It is often used to roll out two colors on top of each other and then it shows the change in color when the inks are laid on top of each other.

**Printing Cylinder** - Round cylinder that printing plates are mounted on and used on printing press, the size of the cylinders is what determines the size, length or width of the bag and the number of colors available for printing.

**Vector Art** - Vector artwork is art that's made up of vector graphics. These graphics are points, lines, curves and shapes that are based on mathematical formulas. When you scale a vector image file, it isn't low resolution and there's no loss of quality, so it can be sized to however large or small you need it to be.

**EPS** - EPS stands for Encapsulated PostScript. EPS is a graphic file format that describes an image (raster/bitmap) or a drawing (vector) or both.

**Digital Plates** - Vector art that is transferred directly from a digital device onto the plate.

**Analog Plates** - Outputting a negative and applying that directly to the plate to produce the image.

# notes
